Quality Policy

Since our foundation, we have always followed the basic principle of putting quality first and implemented quality assurance activities for this purpose.

We are committed to supplying products that satisfy statutory and regulatory requirements, in addition to the requirements of our customers.

Putting quality first does not mean simply providing products with the performance and quality expected by customers in accordance with the delivery date. It also means providing appropriate services that achieve customer satisfaction. To this end, we strive to achieve continuous quality improvement (QI) of our products and services.

To carry out quality assurance (QA) activities, we have established a quality system compliant with the ISO 9001 or JIS Q 9100 (for aviation and space) standards and have formulated quality manuals and individual work standards to ensure they are entrenched as quality assurance mechanisms. On this foundation, we implement QA activities.

It is our goal to always conduct activities that are faithful to the basics and based on data and scientific approaches.

In addition to the quality assurance mechanisms, all employees share a Quality Mindset (QM), which is the stance of putting quality first. We understand this policy and the quality system and strive to improve quality throughout individual employees' duties in order to support quality-first management.

Quality assurance is one of the most important management goals, and to this end we will carry out all activities quickly.
